RUN

Week 07 Run

Week 7 of 52 | Mon 16 Nov 2026 to Sun 22 Nov 2026 | Month 2: Adaptation easing: a little more time at the top of Zone 2

Wednesday, 18 Nov Treadmill walk/run 2:2 (50 min)

Focus: Aerobic, tendon-safe, cadence for the fast-legs feel

Section	Details
Warm-up	5 min brisk walk (3.5-3.8 mph), 1% incline. 20 slow calf raises off the back of the treadmill, 10 leg swings each way.
Main	6 x (2:00 jog / 2:00 walk). Reps 5 and 6 at 180 steps per minute (fast feet, same speed). Total jog time 12:00.
Cool-down	5 min walk, then the 15-minute prehab routine (Achilles and Knee Prehab Guide). Heel drops first.

Notes: Jog = 6.5-7.0 mph (8:35-9:15 per mile), walk = 3.5-3.8 mph. The cap is deliberate: speed is what loads the Achilles. Fast feet = cadence, not speed: on the marked reps hold 180 steps per minute at the same jog speed, shorter and quicker steps, landing under the hips. Pain scale 0 = no pain, 10 = worst pain; write it in the planner note.

Thursday, 19 Nov Optional - Elliptical Zone 2 (40 min)

Focus: Low-impact aerobic time, zero tendon cost. Skip it freely

Section	Details
Main	40 min at a conversational effort (heart rate under about 140). No intervals today.

Notes: Only if the week feels good and the shoulder and legs are quiet. This is the first session to drop when life is busy.

Sunday, 22 Nov Treadmill walk/run 2:2 (45 min)

Focus: Aerobic, tendon-safe, cadence for the fast-legs feel
