PLAN

Month 2 Overview - November 2026

Weeks 5-9 | Phase: Keto-adaptation block | 2 November to 6 December 2026

What changed from Month 1, and why

• Built from the 13 Sep to 13 Oct reflection and your comments on it (Reflections folder).
• Swimming is back (first swim 30 Oct, shoulder 1/10): two short swims a week, Monday after Strength A and Thursday in place of the elliptical. Built around the feeling of being fast: 25s and 50s with full rest, stroke count as the check, fins as a tool. Volume comes later.
• Everything aerobic stays in Zone 1-2 while the body learns to run on ketones (self-rated 70% on 15 Oct). Fast legs come from cadence: 30 s spin-ups on the trainer, 180 steps per minute on marked jog reps.
• No FTP test until the adaptation feeling lifts. Provisional FTP 190 W; checkpoint ride in Week 9 decides.
• Jog capped at 6.5-7.0 mph. Your 8.6 mph intervals felt fine, and the cap is still there because speed is the Achilles load. It rises in Month 3 if November is pain-free.
• Strength B moved to Friday: the Sunday run + strength brick was too hard on keto. Rebuilt 29 Oct as a heavier single-leg day (glute thrust, split squat, single-leg deadlift, weighted step-down, calf raise, Copenhagen plank, Pallof press, suitcase carry): the same protective muscles, loaded like the big lifts you enjoy.
• The optional elliptical is gone from the calendar; it stays as the no-pool fallback in the Thursday swim notes.

Weekly template

Day	Session	Time	Duration
Monday	Strength A - full-body foundation	12:00 PM	45 min
Monday	Swim 1 - fast feel (after Strength A, or move to Tuesday)	12:50 PM	22-35 min
Tuesday	Bike - trainer, ERG, Zone 2 with spin-ups	12:00 PM	40-60 min
Wednesday	Run - treadmill walk/run + prehab	12:00 PM	40-55 min
Thursday	Swim 2 - fast feel (elliptical only if no pool)	12:00 PM	25-32 min
Friday	Strength B - single-leg strength (run durability)	12:00 PM	45 min
Saturday	Bike - weekend ride (outdoor if 5 C+ and dry)	10:00 AM	60-90 min
Sunday	Run - treadmill walk/run (no strength after)	10:00 AM	35-50 min

Calendar slots are placeholders for a mid-day session; drag them to the real time on the day. Every event's single reminder fires at 8:00 AM, nothing earlier.

Week by week

Week	Dates	Theme	Trainer	Weekend ride	Walk/run (x2)	Swims (x2)	Hours
5	02 Nov - 08 Nov	Keto adaptation 1: settle in	45 min	60 min	6 x 1:30 / 2:00 (9 min jog)	900 + 800 m	5.6
6	09 Nov - 15 Nov	Keto adaptation 2: one more rep	50 min	75 min	7 x 1:30 / 2:00 (10.5 min)	950 + 900 m	6.3
7	16 Nov - 22 Nov	Adaptation easing: a little more time at the top of Zone 2	60 min	90 min	6 x 2:00 / 2:00 (12 min)	1000 + 950 m	6.8
8	23 Nov - 29 Nov	Consolidate	60 min	90 min	7 x 2:00 / 2:00 (14 min)	1100 + 1000 m	6.9
9	30 Nov - 06 Dec	Recovery week and checkpoint	40 min	60 min	5 x 1:30 / 2:00 (7.5 min)	700 + 900 m	5.1

Fuelling on keto and modified OMAD

• Sessions up to 60 min: fasted is fine. Water.
• 75-90 min rides: water with electrolytes (sodium first, then potassium and magnesium), even with no food. Many keto athletes need 1-2 g sodium per training hour in the first months.
• If a session falls apart in the second half (shaky, dizzy, power collapses), stop, walk, and note it. That is useful data, not a failure.

End-of-month checkpoint

Measure	Mid-Oct	End of Month 2
Body weight (lb)	just under 200	
Provisional / tested FTP (W)	190 (provisional)	
Walk/run pain scores at or under 3 (0 = no pain)		____ of 10 sessions
Shoulder: pain-free pressing for 2 weeks?	improving	
200 m swim time trial (time, strokes per 25)	30 Oct: 1:50/100 avg, 13 strokes	
Sessions completed		____ of 40
Average Garmin sleep score	80-91
